/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHI, Site 2: BglII;
pBlueScript backbone); Site 1: BamHI, Site 2: BglII;
RescueMu is a 4.9 kb, modifIed maize Mu transposon designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.rmdb.iastate.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002 DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with amplicillin."

                                                                /clone_lib="1118 - RescueMu Grid S"
/clone_Torgan: leaf; Vector: RescueMu; Site_2: BglII;
pBlueScript backbone); Site 1: BamHI; Site_2: BglII;
pBlueScript backbone) modified maize Mu transposon
designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.zmdb.iastate.edu' and follow the links for
'RescueMu.' Grid S was grown at San Diego in 2002. DNA was
extracted from leaf strips, double digested using BamHI
and BglII, and ligated to form circular plasmids. DH108
cells were transformed and then screened on LB plates with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genomic sequences found using engineered RescueMu transposon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conservative
          /clone_lib="1118 - RescueMu Grid S"
/clone_lib="1118 - RescueMu Grid S"
/note="Organ: leaf; Vector: RescueMu (engineered from
pBlueScript backbone); Site 1: BamHI; Site_2: BgJII;
RescueMu is a 4.9 kb, modified maize Mu transposon
designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.zmdb.iastate.edu' and follow the links for
'RescueMu.' Grid S was grown at San Diego in 2002. DNA was
extracted from leaf strips, double digested using BamHI
and BgJII, and ligated to form circular plasmids. DH10B
cells were transformed and then screened on LB plates with
ampicillin."

                                                                                        /clone_lib="1118 - RescueMu Grid S"
/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHI; Site 2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with

units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with

Directional cDNA libraries were constructed by oligo d(T) priming of poly(A)+ RNA (5mg) into EcoRI and XhoI sites of 1 ZapII vector using the Zap cDNA synthesis kit (Stragene, CA). The average size of the CDNA inserts in the library was between 1.0 and 1.5kb. Clones were mass excised using the Exassist helper phage (Stratagene), the phagemids were precitytated with PEG 8000 and extracted with phenol/chloroform. Phagemid DNA was electroporated into DH10B cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pBlueScript backbone); Site 1: BamHI; Site 2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.isstate.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B

/note="Vector: pCMV Sport 6.1; Total RNA samples were
prepared individually from each tissue, checked for
quality, then pooled for construction and normalization
of the cDNA library by Invitrogen. Plasmids were
isolated and inserts end-sequenced by the Marine DNA
Sequencing and Analysis Facility at the Center for Marine
Functional Genomic Studies, Mount Desert Island
Biological Laboratory (J.N. Forrest, Jr., Director).
Traces were processed for submission to db8ST by
trace2dbest software (Parkinson, Anthony and Blaxter,
unpublished software). The project was supported by NIH
Grant Number P20-RR-16463 from the INBRE Program of the
National Center for Research Resources (P.H. Hand, PI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone="Cm mx0 51h03"

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for associated proteins that have delta-endotoxin or delta-endotoxin-associated proteins that have besticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1686 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (ATHE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.

        This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin-associated proteins that have pesticidal activity, or for detecting the
                                                                                                                                                                                                   Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                              19-FEB-2004;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to modified insecticidal Bacillus thuringiensis crystal proteins Cry4Ba and Cry19Aa which have enhanced coxicity against a variety of insects, e.g. mosquitos and lepidoptera. The modified proteins are useful for reducing or eliminating populations of target insects that are vectors of disease, particularly mosquitoes. The present sequence is the coding sequence of the wild-type Cry19Aa protein, which can be modified with: a substitution of amino acids at positions 355 through 358 with amino acids tyrosine, glutamine, aspartic acid, and leucine; an insertion of at least one amino acid (e.g. arginine) after position 358 and a deletion of the amino acids at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New modified Bacillus thuringiensis insecticidal crystal proteins (i.e. Cry4Ba and Cry19Aa) with enhanced toxicity, useful for reducing or eliminating populations of target insects (i.e. mosquitoes) that are vectors of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4391 BP; 1557 A; 630 C; 914 G; 1290 T; 0 U; 0 Other;

31-OCT-2002
13-NOV-1990
                                                                                                                                                                          This gene is ligated to a promoter region enabling expression in Cyanobacteria and the resultant chimeric gene is used to produce Bacillus Charleinsis 8 (Bt 8) protein. A truncated form of the protein can also be produced using a shorter gene. Transformed cyanobacteria and their progeny can be used in insecticidal compsns., esp, for controlling mosquitos. (Updated on 31-OCT-2002 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bt 8

The present invention relates to a new chimeric gene expressed in cells of a Cyanobacterium such as Synechocystis 680. The gene comprises a DNA fragment having a promoter region, for expression of a DNA fragment in the Cyanobacterium, and a fragment coding for an insecticidally active protein endotoxin produced by Bacillus thuringiensis, B. sphaericus or kurstaki strain, or for a truncated form of the protein. Cyanobacterium is useful for controlling mosquitoes in water by applying the bacterium

œ

Novel chimeric gene expressed in cells of Cyanobacterium for controlling mosquitoes in water, comprises a DNA fragment comprising promoter region and a DNA fragment containing gene encoding for insecticidal protein.

The invention is useful as viable inoculum to settle the regions, especially the swamps and all stagnant waters which promote the growth of mosquito larvae. Cyanobacterium provides better control of mosquitoes, ensures a long-term destruction of mosquitoes, guarantees direct uptake of the bacterium by the mosquitoes and assures more stable availability of the toxin in the vicinity surface since it is self replicating and floats at or near the water surface. The present nucleic acid sequence encodes the B. thuringiensis variant israelensis toxin (BBB) protein of the invention. (Updated on 29-AUG-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3684 BP; 1301 A; 587 C; 694 G; 1102 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2173

The present invention relates to modified insecticidal Bacillus CC thuringiensis crystal proteins Cry4Ba and Cry19Aa which have enhanced CC toxicity against a variety of insects, e.g. mosquitos and lepidoptera. CC The modified proteins are useful for reducing or eliminating populations of target insects that are vectors of disease, particularly mosquitoes. CC The present sequence is the coding sequence for the will-type Cry4Ba CC protein, which can be modified as follows: the amino acid aspartic acid at position 454 is substituted with, for example proline, glycine, CC alanine or threonine, and at least two or more additional amino acids are inserted after the substitution, where the amino acids inserted after the substitution, where the amino acids inserted after the substituted and valine. In addition, the modified CC cry4Ba protein may comprise the following substitutions: Thr456 is CC cry4Ba protein may comprise the following substitutions: Thr456 is CC cry4Ba protein may comprise the following substitutions: Thr456 is CC cry4Ba protein may comprise the following substitutions the modified CC with alanine; Ile580 is replaced with alanine, phenylalanine or tyrosine; CC Ile581 is replaced with alanine, phenylalanine or tyrosine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                A toxin active against dipteran insects, having a specified as sequence or a mutant having the same protein secondary structure or, if the structure is altered, having the same biological activity, is claimed. Also claimed is a DNA molecule including a nucleotide sequence encoding the as sequence. The novel toxin gene is toxic to dipteran insects e.g. mosquitos. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                              Sequence
